

PROCEDURE FOR OBTAINING A CANNERY LICENSE

License Application Form: DHS 8597

California Health and Safety Code (H&SC) Sections 112750 and 112675 require that canners of pH Control Foods - Acidified Low-Acid Foods (**AF**), and/or Thermal Process-Low Acid Canned Foods (**LACF**), must obtain a license issued by the California Department of Health Services' Food and Drug Branch (FDB) to operate a cannery facility in California. The following describes what you must do to obtain a cannery license.

LICENSE APPLICATION

Before you submit a fully completed application form with the required fee, please read the procedures for **AF** and **LACF** below (**see also license fee waiver below).

The application submission timing differs depending on the type of product being manufactured (**AF** or **LACF**), in that; laboratory testing of **AF** product will be necessary to confirm the product's status prior to the submission of your application. There is no charge to the canner for the initial testing done by FDB's scientific consultant at the **University of California Laboratory for Research in Food Preservation (UCLRFP)**. You may call the Cannery License Desk at (916) 650-6500 to receive the appropriate forms and license application (Form DHS 8597) by mail, or download the form from the FDB website: (<http://www.dhs.ca.gov/publications/forms/pdf/dhs8597.pdf> ; "Application Instructions and Forms").

Please make sure to write your firm name, license number (If the application is for renewal of your license), and the phrase "PCA Code 85124" on your check or money order. The license fee is non-refundable.

The license is valid for two fiscal years. The fiscal year begins on July 1st and ends on June 30th. The licensed canner is required to renew every two years prior to their license expiration. The business address must be that of the canning plant, not the corporate headquarters. The mailing address can be either that of the canning plant, corporate headquarters or the firm's branch office (the license will be mailed to the mailing address). An incomplete and/or illegible application will be RETURNED to the applicant.

An FDB investigator will perform an on-site inspection of the plant before a license is issued, to assure that the canning facility meets the requirements specified in the Cannery Statutes (H&SC 112650 et seq.) and the California Code of Regulations (Title 17 CCR Section 12400 et seq.).

If you are canning pH Controlled **AF** products, you will also be required to comply with the federal regulations in Title 21 Code of Federal Regulations Part 114.

If you are canning **LACF** products, you will also be required to comply with the federal regulations in Title 21 Code of Federal Regulations Part 113.

If your **AF** and/or **LACF** product contains **fish** and **fishery products**, you will also be required to comply with the federal HACCP (Hazard Analysis Critical Control Point) regulations in Title 21 Code of Federal Regulations Part 123.

THE LICENSE INSPECTION

FDB personnel will contact applicants after the submission of their license application, to schedule an initial licensing inspection. During the license inspection process, FDB will inspect for adequacy of facilities, equipment, personnel qualifications, personnel practices, manufacturing procedures and controls, overall sanitation, ingredients and raw materials, container coding, container integrity, labeling, production record keeping, storage and distribution processes, and registration with FDA. FDB will insure that each **AF** and **LACF** product meets its requirements in the **Official Scheduled Process** issued by FDB and that each of the products are identified by a unique **S-number**. The S-number is generated by the U.C. Laboratory and maintained by FDB throughout the history of each specific **AF** and/or **LACF** product. FDB will also insure that each lot/batch of **AF** and/or **LACF** product is properly documented on pre-numbered and investigator initialed production records. The **production records** and **LACF** cook charts MUST be numbered in sequence beginning with number 1 for the period July 1 through June 30 of the following year. FDB personnel will number and initial the production records and charts prior to actual production, so that these records will be ready for the canner to use. The production records will document all critical data for each lot/batch of **AF** and/or **LACF** product as required by the Official Scheduled Process, including name of canner, date of pack, product name, person(s) responsible for processing, total number of containers packed, container integrity testing records and distinct code for each product. The **container code** can consist of any combination of numbers or letters, but the following information must be identified: **(a)** the plant (or company) where product is processed; **(b)** the year of pack; **(c)** a distinct product code; **(d)** the date of pack; and, **(e)** batch or cook code. (Note: It is recommended that, unless there is a distinct batch manufactured each day, the batch number should be changed every 2 hours.)

*****Cannery License Fee Waiver:** The cannery license fee may be waived if you can provide a photocopy of your valid California Processed Food Registration Certificate. The registration is mandatory for all food processors and wholesalers of processed food (H&SC 110460).

AF Procedures

Definition

By regulation, canned Acidified Foods (**AF**) are defined as, “low-acid foods to which acid(s) or acid food(s) are added; these foods include, but are not limited to, beans, cucumbers, cabbage, artichokes, cauliflower, puddings, peppers, tropical fruits, and fish, singly or in any combination. They have a water activity greater than 0.85 and have a finished equilibrium pH of 4.6 or below. These foods may be called, or may purport to be, “pickles” or “pickled _____.” Carbonated beverages, jams, jellies, preserves, acid foods (including such foods as standardized and nonstandardized food dressings and condiment sauces) that contain small amounts of low-acid food(s) and have a resultant finished equilibrium pH that does not significantly differ from that of the predominant acid or acid food, and foods that are stored, distributed, and retailed under refrigeration are excluded.”

Procedures

If your product could be an AF, you must first submit a complete **“Request For pH Control”** form along with two samples of your product to the State’s consulting Laboratory for evaluation. The samples and completed form should be sent to:

University of California, Davis
Laboratory For Research In Food Preservation
(UCLRFP)
6363 Clark Avenue
Dublin, CA 94568-3097
(925) 828-1790

The form can be obtained from the nearest FDB office or downloaded at this website:
<http://www.dhs.ca.gov/fdb/HTML/food/indexcan.htm>

UCLRFP will evaluate the product, formulation, and processing data the canner has provided and recommend the appropriate scheduled process to FDB. In response, FDB will generate an **Official Scheduled Process** letter containing an **S-number** and forward the letter to the potential canner. If the recommendation is that the product need NOT be packed under pH control, then the specific product will not be covered under the Cannery Inspection Program, but still must be manufactured in a food processing facility registered under FDB’s Processed Food Registration Program (PFR). Please call the nearest FDB office for PFR registration information and an application form.

Please allow 4-6 weeks for review of samples submitted to UCLRFP and a response from FDB.

LACF PROCEDURES

Definition

By regulation a Low Acid Canned Food (**LACF**) is defined as, “any foods, other than alcoholic beverages, with a finished equilibrium pH greater than 4.6 and a water activity greater than 0.85. Tomatoes and tomato products having a finished equilibrium pH less than 4.7 are not classed as low-acid foods.”

Procedures

If your product could be LACF, you must complete and submit the “**REQUEST FOR OFFICIAL STERILIZATION PROCESS**” form to the State’s consulting Laboratory for evaluation:

**University of California, Davis
Laboratory For Research In Food Preservation
(UCLRFP)
6363 Clark Avenue
Dublin, CA 94568-3097
(925) 828-1790**

The form can be obtained from the nearest FDB office or downloaded at this website:
<http://www.dhs.ca.gov/fdb/HTML/food/indexcan.htm>

In response, a UCLRFP scientist will evaluate the request for sterilization process. Information on the type of processing equipment to be used should also be submitted. The scientist may require additional information and will contact the applicant if that is the case. The scientific data derived from this in depth evaluation will be used by UCLRFP to establish a scheduled process recommendation for FDB. As result, FDB will generate the Official Scheduled Process **S-number** letter that is specific to a product and corresponding canner. This process letter is mailed to the canner and it will contain the mandatory product-processing requirements.

LACF canners must have **permitted retort operators** to operate their retorts or aseptic systems. Upon written request by the canner, an FDB investigator will give prospective operators written and practical examinations on equipment operation. Upon successful completion of both exam components, operators will be issued the permit.

REQUIREMENTS COMMON TO BOTH AF AND LACF CANNERIES

Important Note: Sample product formulations and/or **trade secrets** that are inspected, reviewed and/or submitted to either UCLRFP and/or FDB are protected by law. H&SC 110165 makes it unlawful for any person to use to his own advantage, or to reveal to any person other than to the director or officers or employees of this department, or to the courts when relevant in any judicial proceeding under this division, any information

acquired under authority of this division concerning any method or process which as a trade secret is entitled to protection.

All licensed canneries under the California Cannery Inspection Program must meet the following requirements:

- 1 Both AF and LACF canneries must comply with applicable laws and regulations, including the requirement that a plant specific container lot coding system be submitted to FDB. The product container coding system must address the requirements in regulation, such as, any combination of numbers or letters to identify: (a) the plant (or company) where product is processed; (b) the year of pack; (c) a distinct product code; (d) the date of pack; and, (e) batch or cook code. The coding system must accommodate a change in batch numbers every 2 hours.
- 2 All batches/lots of AF and/or LACF products produced under the Cannery Inspection Program must first be inspected and released by FDB prior to distribution. This means that the licensed cannery MUST notify FDB at least 48 hours in advance of any scheduled production of AF or LACF products. FDB will arrange to inspect the facility and audit production records, shortly after the product was produced. FDB will also test AF products for pH and may draw samples for laboratory testing.
- 3 The licensed AF and/or LACF canner must report any known product spoilage and/or product related foodborne illness to FDB in a timely manner. The canner must also report any product recall and/or market withdrawals of regulated products to FDB.
- 4 All fish and seafood AF and/or LACF products produced at a licensed cannery must also meet the federal Hazard Analysis and Critical Control Point (HACCP) requirements in Title 21 Code of Federal Regulations, Part 123, before the products will be released by FDB.
- 5 All AF and/or LACF products shall be produced at a licensed cannery under the supervision of at least one person who has passed the prescribed course of instruction and training requirements specified in 21 CFR 113.10 and/or 21 CFR 114.10 (e.g., Better Process Control School).
- 6 Licensed canners must pay for all costs of inspection, including in-plant inspection and travel time to the facility by the FDB investigator. The fees include the cost of laboratory services provided by UCLRFP. The canner will be billed on a monthly basis. As specified in law, the Cannery Inspection Board establishes the hourly rate for inspection. The rate currently starts at approximately \$120 per hour.
- 7 All California licensed canners trading in interstate commerce must be registered as a Food Canning Establishment (FCE) with the U.S. Food and Drug Administration (FDA). Canners are also responsible for registering all of their AF and LACF products with FDA. For FDA registration, contact the FDA at (202) 205-5282, visit their website: <http://www.cfsan.fda.gov/~comm/lacf-toc.html> - guides

or write to:

LACF Registration Coordinator (HFS-618)
U.S. Food and Drug Administration
Center for Food Safety & Applied Nutrition
5100 Paint Branch Parkway,
College Park, MD 20740

- 8 If your product is not subject to FDB's cannery inspection program (**not AF or LACF**) as determined by laboratory and FDB evaluation, then the canned food product must be manufactured in a food processing facility registered with FDB's **Processed Food Registration Program** (PFR). Please call (916) 650-6500 for PFR registration information and an application form. You may also obtain information about the PFR program at: <http://www.dhs.ca.gov/fdb/HTML/food/procfdrg.htm>.

For additional information and questions, please call or contact FDB at one of the following offices:

FOOD AND DRUG BRANCH OFFICES
